SIMPLE WAY

to secure privileged accounts

DISCOVER

Find privileged accounts on network devices: computer local administrators, factory defaults, IoT logins, router and firewall default accounts, etc

SHARE

Store privileged credentials in an encrypted vault with capability to share them among team members, external contractors and also use them in scripts and workflows via API

ROTATE

Change passwords for privileged accounts periodically or after certain events so that PAM System is the only source of the up-to-date information for passwords and certificates

DELEGATE

Elevate privileges of regular users for designated tasks in managed, permissions controlled way with audit log

CONNECT

Let designated users to establish sessions to remote computers without disclosing credentials providing session recording for future audit
